TEST BANK

Child Development

Laura E. Berk

Test Bank For Child Development 9th Edition by Laura E. Berk

Table of Contents

Part I: Theory and Research in Child Development

Chapter 1 History, Theory, and Applied Directions

Chapter 2 Research Strategies

Part II: Foundations of Development

Chapter 3 Biological Foundations, Prenatal Development, and Birth

Chapter 4 Infancy: Early Learning, Motor Skills, and Perceptual Capacities

Chapter 5 Physical Growth

Part III: Cognitive and Language Development

Chapter 6 Cognitive Development: Piagetian, Core Knowledge, and Vygotskian

Perspectives

Chapter 7 Cognitive Development: An Information-Processing Perspective

Chapter 8 Intelligence

Chapter 9 Language Development

Part IV: Personality and Social Development

Chapter 10 Emotional Development

Chapter 11 Self and Social Understanding

Chapter 12 Moral Development

Chapter 13 Development of Sex Differences and Gender Roles

Part V: Contexts for Development

Chapter 14 The Family

Chapter 15 Peers, Media, and Schooling

CHAPTER 1 HISTORY, THEORY, AND APPLIED DIRECTIONS MULTIPLE CHOICE

1) The field of child development

A) is devoted to understanding human constancy and change throughout the lifespan.

B) is part of a larger, interdisciplinary field known as developmental science.

C) focuses primarily on children's physical and emotional development.

D) focuses primarily on infants' and children's social and cognitive development.

Answer: B

Page Ref: 4

2) The common goal of investigators who study child development is to

A) understand how physical growth and nutrition contribute to health and well-being throughout the lifespan.

B) understand more about personality and social development.

C) analyze child-rearing practices and experiences that promote children's well-being.

D) describe and identify those factors that influence the consistencies and changes in young people during the first two decades of life.

Answer: D

Page Ref: 4

3) Which of the following factors contributed to the study of child development in the twentieth century?

A) The beginning of public education led to a demand for knowledge about what and how to teach children of different ages.

B) Parents were having more children and researchers became interested in the effects of family size on children's well-being.

C) Pediatricians were pressured by insurance companies to improve children's health, which inspired nutritional research.

D) High rates of childhood depression inspired new areas of research into children's anxieties and behavior problems.

Answer: A

Page Ref: 4

4) Which of the following statements is true about the field of child development?

A) Scientific curiosity is the prevailing factor that led to the study of children, and current researchers primarily answer questions of scientific interest.

B) The field of child development is considered interdisciplinary because it has grown through the combined efforts of people from many fields.

C) Child development is the area of study devoted to understanding constancy and change throughout the lifespan.

D) Most of what we know about child development comes from psychologists and medical professionals. Answer: B

Page Ref: 4

5) Development is often divided into which of the following three broad domains?

A) infancy, childhood, and adolescence

B) social, cultural, and historical

C) physical, cognitive, and emotional and social

D) biological, social, and intellectual

Answer: C

Page Ref: 4

6) The domains of development

- A) combine in an integrated, holistic fashion.
- B) are not influenced by each other.
- C) operate independently of one another.

D) are distinct and unrelated.

Answer: A

Page Ref: 4

7) What period of human development brings the most rapid time of change?

A) the prenatal period

B) infancy and toddlerhood

- C) early childhood
- D) adolescence

Answer: A

Page Ref: 5

8) During which period of development do children form their first intimate ties to others?

- A) the prenatal period
- B) infancy and toddlerhood
- C) early childhood
- D) middle childhood

Answer: B

Page Ref: 5

9) Charlotte is long and lean. She engages in make-believe play and has a blossoming sense of morality. Charlotte is probably in which period of human development?

- A) the prenatal period
- B) infancy and toddlerhood
- C) early childhood
- D) middle childhood

Answer: C

Page Ref: 5–6

10) Pete participates in soccer and is beginning to master fundamental reading and math skills. Pete is probably in which period of human development?

- A) adolescence
- B) middle childhood
- C) early childhood
- D) infancy and toddlerhood

Answer: B

Page Ref: 6

11) During adolescence,

- A) thought and language expand at an astounding rate.
- B) young people begin to master academic knowledge and skills.
- C) young people fully assume adult roles.
- D) thought becomes abstract and idealistic.

Answer: D

Page Ref: 6

12) Which of the following factors have contributed to the period of development called emerging adulthood?

A) Teenagers from large families assume adult roles upon entering adolescence.

B) The transition to adult roles has become increasingly prolonged.

C) Schooling is increasingly directed toward preparation for the world of work.

D) Young people make enduring commitments soon after high school graduation.

Answer: B

Page Ref: 6

13) A good theory

A) provides an ultimate truth.

B) cannot be scientifically verified.

C) describes, explains, and predicts behavior.

D) is not influenced by the cultural values or beliefs of its time.

Answer: C

Page Ref: 6

14) Which of the following statements is true about child development theories?

A) They guide and give meaning to our observations and help us understand development.

B) They are defined as mere opinions or beliefs.

C) They provide ultimate truths about children and adolescents.

D) They are difficult to verify, even with contemporary research methods.

Answer: A

Page Ref: 6

15) Theories differ from mere opinion and belief in that

A) they provide the ultimate truth.

B) they are usually too abstract to be used as a basis for practical action.

C) they cannot be tested in a research setting.

D) their continued existence depends on scientific verification.

Answer: D

Page Ref: 7

16) The continuous development view holds that

A) infants and preschoolers respond to the world in much the same way as adults do.

B) children's thoughts, emotions, and behavior differ considerably from those of adults.

C) development takes place in stages.

D) development is much like climbing a staircase.

Answer: A

Page Ref: 7

17) Eight-month-old Annabelle is not yet able to organize objects or remember and interpret experiences as an adult does because her development is

A) continuous.

B) discontinuous.

C) stable.

D) plastic.

Answer: B

Page Ref: 7–8

18) The concent of	is characteristic of	theories
A) nurture; continuous		
B) context; nature		
C) change; heredity		
D) stages; discontinuous		
Answer: D		
Page Ref: 8		
19) The stage concept assumes that children		
A) gradually add more of the same types of skills that were there to begin with.		
B) undergo a slow transformation as they step up from one stage to the next.		
C) make fairly sudden and distinct changes as they grow.		
D) think just as logically as a		
Answer: C		
Page Ref: 8		
20) Dr. Zettler compares children growing up in non-Western village societies with those growing up in		
· · ·	ttler likely emphasizes	
A) the nature–nurture controv		
B) the effects of distinct cont	•	
C) the concept of step-by-step	1	
D) continuous development		
Answer: B		
Page Ref: 8		
21) Dr. Hoo believes that children who are high in verbal ability, anxiety, or sociability will remain so at		
later ages. Dr. Hoo likely emphasizes the role of in her research.		
A) plasticity		
B) stability		
C) discontinuity		
D) context		
Answer: B		
Page Ref: 9		
22) Dr. Shepherd studies individual differences in intelligence, personality, and social skills of identical		
twins raised in different families. Dr. Shepherd likely emphasizes the role of in his research.		
A) heredity		
B) plasticity		
C) early experiences		
D) stability		
Answer: A		
Page Ref: 9		
23) Theorists who emphasiz	ein explaining	individual differences typically stress the
importance of		
A) early experiences; discont	inuity	
B) stability; nurture		
C) the environment; early exp	periences	
D) context; continuity		
Answer: C Page Ref: 9		

24) Professor Cortez believes that development is largely due to nature. Professor Cortez would argue that

A) early intervention is of supreme importance for economically at-risk children.

B) environmental factors have a greater impact on development than genetic factors.

C) offering high-quality stimulation in infancy and toddlerhood is vital for favorable development.

D) providing experiences aimed at promoting change is of little value.

Answer: D

Page Ref: 9

25) Which of the following factors fosters resilience?

A) an inability to inhibit impulses

B) having more than two siblings

C) social support outside the immediate family

D) an emotionally reactive personality

Answer: C

Page Ref: 10-11 Box: BIOLOGY AND ENVIRONMENT: Resilient Children

26) The most consistent asset of resilient children is

A) a strong bond with a competent, caring adult.

B) high academic performance in elementary school.

C) musical ability.

D) athletic competence.

Answer: A

Page Ref: 11 Box: BIOLOGY AND ENVIRONMENT: Resilient Children

27) During medieval times,

A) children were treated as adults once they were old enough to perform daily routines.

B) clear awareness existed of children as vulnerable beings.

C) children were viewed as blank slates.

D) harsh, restrictive child-rearing practices were recommended to tame depraved children.

Answer: B

Page Ref: 11

28) During the Reformation, the Puritans

A) characterized children as innocent and close to angels.

B) regarded children as fully mature by the time they were 7 or 8 years old.

C) suggested that parents reward children with praise and approval.

D) believed that children were born evil and stubborn and had to be civilized.

Answer: D

Page Ref: 11

29) In the sixteenth century, _____ prevented most Puritan parents from using extremely repressive child-rearing measures.

A) the belief that children are vulnerable

B) religious prohibitions against harsh punishment

C) love and affection for their children

D) the belief that children are close to angels

Answer: C

Page Ref: 11
