Lewis's Medical-Surgical Nursing: Assessment and Management of Clinical Problems 11th Edition ISBN: 9780323551496 Courtney Reinisch, Debra Hagler, Dottie Roberts, Jeffrey Kwong, Mariann M Harding

**Lewis's Medical-Surgical Nursing: Assessment and Management of Clinical Problems 11th
Edition ISBN: 9780323551496 Courtney Reinisch, Debra Hagler, Dottie Roberts, Jeffrey
Kwong, Mariann M Harding**

Table of Content

Section One – Concepts in Nursing Practice

1. Professional Nursing
2. Health Equity and Culturally Competent Care
3. Health History and Physical Examination
4. Patient and Caregiver Teaching
5. Chronic Illness and Older Adults

Section Two – Problems Related to Comfort and Coping

6. Stress Management
7. Sleep and Sleep Disorders
8. Pain
9. Palliative and End-of-Life Care
10. Substance Use Disorders

Section Three – Problems Related to Homeostasis and Protection

11. Inflammation and Healing
12. Genetics
13. Immune Responses and Transplantation
14. Infection
15. Cancer
16. Fluid, Electrolyte, and Acid-Base Imbalances

Section Four – Perioperative Care

17. Management: Preoperative Care
18. Management: Intraoperative Care
19. Management: Postoperative Care

Section Five – Problems Related to Altered Sensory Input

20. Assessment and Management: Visual Problems
21. Assessment and Management: Auditory Problems
22. Assessment: Integumentary System
23. Management: Integumentary Problems
24. Management: Burns

Section Six – Problems of Oxygenation: Ventilation

25. Assessment: Respiratory System
26. Management: Upper Respiratory Problems
27. Management: Lower Respiratory Problems
28. Management: Obstructive Pulmonary Diseases

Section Seven – Problems of Oxygenation: Transport

29. Assessment: Hematologic System

30. Management: Hematologic Problems

Section Eight – Problems of Oxygenation: Perfusion

31. Assessment: Cardiovascular System

32. Management: Hypertension

33. Management: Coronary Artery Disease and Acute Coronary Syndrome

34. Management: Heart Failure

35. Management: Dysrhythmias

36. Management: Inflammatory and Structural Heart Disorders

37. Management: Vascular Disorders

Section Nine – Problems of Ingestion, Digestion, Absorption, and Elimination

38. Assessment: Gastrointestinal System

39. Management: Nutritional Problems

40. Management: Obesity

41. Management: Upper Gastrointestinal Problems

42. Management: Lower Gastrointestinal Problems

43. Management: Liver, Biliary Tract, Pancreas

Section Ten – Problems of Urinary Function

44. Assessment: Urinary System

45. Management: Renal and Urologic Problems

46. Management: Acute Renal Failure and Chronic Kidney Disease

Section Eleven – Problems Related to Regulatory and Reproductive Mechanisms

47. Assessment: Endocrine System

48. Management: Diabetes Mellitus

49. Management: Endocrine Problems

50. Assessment: Reproductive System

51. Management: Breast Disorders

52. Management: Sexually Transmitted Infections

53. Management: Female Reproductive Problems

54. Management: Male Reproductive Problems

Section Twelve – Problems Related to Movement and Coordination

55. Assessment: Nervous System

56. Management: Acute Intracranial Problems

57. Management: Stroke

58. Management: Chronic Neurologic Problems

59. Management: Alzheimer's Disease and Dementia

60. Management: Peripheral Nerve and Spinal Cord Problems

61. Assessment: Musculoskeletal System

62. Management: Musculoskeletal Trauma and Orthopedic Surgery

63. Management: Musculoskeletal Problems

64. Management: Arthritis and Connective Tissue Diseases

Section Thirteen – Nursing Care in Specialized Settings

- 65. Management: Critical Care
- 66. Management: Shock, Systemic Inflammatory Response Syndrome, and Multiple Organ Dysfunction Syndrome
- 67. Management: Respiratory Failure and Acute Respiratory Distress Syndrome
- 68. Management: Emergency Care Situations

Chapter 01: Professional Nursing

Harding: Lewis's Medical-Surgical Nursing, 11th Edition

MULTIPLE CHOICE

1. The nurse completes an admission database and explains that the plan of care and discharge goals will be developed with the patient's input. The patient asks, "How is this different from what the doctor does?" Which response would be **most** appropriate for the nurse to make?
 - a. "The role of the nurse is to administer medications and other treatments prescribed by your doctor."
 - b. "In addition to caring for you while you are sick, the nurses will help you plan to maintain your health."
 - c. "The nurse's job is to help the doctor by collecting information and communicating any problems that occur."
 - d. "Nurses perform many of the same procedures as the doctor, but nurses are with the patients for a longer time than the doctor."

ANS: B

The American Nurses Association (ANA) definition of nursing describes the role of nurses in promoting health. The other responses describe dependent and collaborative functions of the nursing role but do not accurately describe the nurse's unique role in the health care system.

DIF: Cognitive Level: Analyze (analysis)

TOP: Nursing Process: Implementation MSC: NCLEX: Safe and Effective Care Environment

2. The nurse describes to a student nurse how to use evidence-based practice (EBP) when caring for patients. Which statement by the nurse accurately describes the use of EBP?
 - a. "Inferences from all published articles are used as a guide."
 - b. "Patient care is based on clinical judgment, experience, and traditions."
 - c. "Data are analyzed later to show that the patient outcomes are consistently met."
 - d. "Recommendations are based on research, clinical expertise, and patient preferences."

ANS: D

Evidence-based practice (EBP) is the use of the best research-based evidence combined with clinician expertise and consideration of patient preferences. Clinical judgment based on the nurse's clinical experience is part of EBP, but clinical decision making should also incorporate current research and research-based guidelines. Evaluation of patient outcomes is important, but data analysis is not required to use EBP. All published articles do not provide research evidence; interventions should be based on credible research, preferably randomized controlled studies with a large number of subjects.

DIF: Cognitive Level: Remember (knowledge)

TOP: Nursing Process: Planning

MSC: NCLEX: Safe and Effective Care Environment

3. The nurse teaches a student nurse about how to apply the nursing process when providing patient care. Which statement by the student nurse indicates that teaching was successful?
 - a. "The nursing process is a research method of diagnosing the patient's health care problems."
 - b. "The nursing process is used primarily to explain nursing interventions to other

- health care professionals.”
- c. “The nursing process is a problem-solving tool used to identify and treat the patients’ health care needs.”
 - d. “The nursing process is based on nursing theory that incorporates the biopsychosocial nature of humans.”

ANS: C

The nursing process is a problem-solving approach to the identification and treatment of patients’ problems. Nursing process does not require research methods for diagnosis. The primary use of the nursing process is in patient care, not to establish nursing theory or explain nursing interventions to other health care professionals.

DIF: Cognitive Level: Understand (comprehension)
MSC: NCLEX: Safe and Effective Care Environment

TOP: Nursing Process: Evaluation

4. A patient admitted to the hospital for surgery tells the nurse, “I do not feel comfortable leaving my children with my parents.” Which action should the nurse take **next**?
- a. Reassure the patient that these feelings are common for parents.
 - b. Have the patient call the children to ensure that they are doing well.
 - c. Gather information on the patient’s concerns about the child care arrangements.
 - d. Call the patient’s parents to determine whether adequate child care is being provided.

ANS: C

Because a complete assessment is necessary in order to identify a problem and choose an appropriate intervention, the nurse’s first action should be to obtain more information. The other actions may be appropriate, but more assessment is needed before the best intervention can be chosen.

DIF: Cognitive Level: Analyze (analysis)

OBJ: Special Questions: Prioritization

TOP: Nursing Process: Assessment

MSC: NCLEX: Psychosocial Integrity

5. A patient with a bacterial infection is hypovolemic due to a fever and excessive diaphoresis. Which expected outcome would the nurse recognize as appropriate for this patient?
- a. Patient has a balanced intake and output.
 - b. Patient’s bedding is kept clean and free of moisture.
 - c. Patient understands the need for increased fluid intake.
 - d. Patient’s skin remains cool and dry throughout hospitalization.

ANS: A

Balanced intake and output gives measurable data showing resolution of the problem of deficient fluid volume. The other statements would not indicate that the problem of hypovolemia was resolved.

DIF: Cognitive Level: Apply (application)
MSC: NCLEX: Physiological Integrity

TOP:

Nursing Process: Planning

6. After administering medication, the nurse asks the patient if pain was relieved. What is the purpose of the evaluation phase of the nursing process?
- a. To document the nursing care plan in the progress notes of the health record
 - b. To determine if interventions have been effective in meeting patient outcomes

- c. To decide whether the patient's health problems have been completely resolved
- d. To establish if the patient agrees that the nursing care provided was satisfactory

ANS: B

Evaluation consists of determining whether the desired patient outcomes have been met and whether the nursing interventions were appropriate. The other responses do not describe the evaluation phase.

DIF: Cognitive Level: Understand (comprehension)

TOP: Nursing Process: Evaluation

MSC: NCLEX: Safe and Effective Care Environment

7. The nurse interviews a patient while completing the health history and physical examination. What is the purpose of the assessment phase of the nursing process?
- a. To teach interventions that relieve health problems
 - b. To use patient data to evaluate patient care outcomes
 - c. To help the patient identify realistic outcomes for health problems
 - d. To obtain data with which to diagnose patient strengths and problems

ANS: D

During the assessment phase, the nurse gathers information about the patient to diagnose patient strengths and problems. The other responses are examples of the planning, intervention, and evaluation phases of the nursing process.

DIF: Cognitive Level: Understand (comprehension)

TOP: Nursing Process: Assessment

MSC: NCLEX: Safe and Effective Care Environment

8. The nurse admits a patient to the hospital and develops a plan of care. What components should the nurse include in the patient problem statement?
- a. The problem and the suggested patient goals or outcomes
 - b. The problem, its causes, and the signs and symptoms of the problem
 - c. The problem with the possible etiology and the planned interventions
 - d. The problem, the pathophysiology of the problem, and the expected outcome

ANS: B

When writing patient problems or nursing diagnoses, this format should be used: problem, etiology, and signs and symptoms. The subjective as well as objective data should be included. Goals, outcomes, and interventions are not included in the problem statement.

DIF: Cognitive Level: Understand (comprehension)

TOP: Nursing Process: Diagnosis

MSC: NCLEX: Safe and Effective Care Environment

9. Which patient care task is appropriate for the nurse to delegate to experienced unlicensed assistive personnel (UAP)?
- a. Instruct the patient about the need to alternate activity and rest.
 - b. Monitor level of shortness of breath or fatigue after ambulation.
 - c. Obtain the patient's blood pressure and pulse rate after ambulation.
 - d. Determine whether the patient is ready to increase the activity level.

ANS: C

UAP education includes accurate vital sign measurement. Assessment and patient teaching require registered nurse education and scope of practice and cannot be delegated.
