

TEST BANK

Test Bank Maternal and Child Health Nursing 8th Edition by JoAnne Silbert-Flagg

Test bank for Maternal and Child Health Nursing: Care of the Child bearing and Child rearing Family 8th Edition by Jo Anne Silbert Flagg & Dr. Adele Pillitteri

TABLE OF CONTENT

UNIT 1 Maternal and Child Health Nursing Practice

- 1 A Framework for Maternal and Child Health Nursing
- 2 Diversity and Maternal Child Nursing
- 3 The Childbearing and Childrearing Family in the Community
- 4 Home Care and the Childbearing and Childrearing Family

UNIT 2 The Nursing Role in Preparing Families for Childbearing and Childrearing

- 5 The Nursing Role in Reproductive and Sexual Health
- 6 Nursing Care for the Family in Need of Reproductive Life Planning
- 7 Nursing Care of the Family Having Difficulty Conceiving a Child
- 8 The Nursing Role in Genetic Assessment and Counseling

UNIT 3 The Nursing Role in Caring for Families During Normal Pregnancy, Birth, the Postpartum, and Newborn Period

- 9 Nursing Care During Normal Pregnancy and Care of the Developing Fetus
- 10 Nursing Care Related to Psychological and Physiologic Changes of Pregnancy
- 11 Nursing Care Related to Assessment of a Pregnant Family
- 12 Nursing Care to Promote Fetal and Maternal Health
- 13 The Nursing Role in Promoting Nutritional Health During Pregnancy
- 14 Preparing a Family for Childbirth and Parenting
- 15 Nursing Care of a Family During Labor and Birth
- 16 The Nursing Role in Providing Comfort During Labor and Birth
- 17 Nursing Care of a Postpartal Family

18 Nursing Care of a Family With a Newborn

19 Nutritional Needs of a Newborn

UNIT 4 The Nursing Role in Caring for a Family During Complications of Pregnancy, Birth, or the Postpartum Period

20 Nursing Care of a Family Experiencing a Pregnancy Complication From a Preexisting or Newly Acquired Illness

21 Nursing Care of a Family Experiencing a Sudden Pregnancy Complication

22 Nursing Care of a Pregnant Family With Special Needs

23 Nursing Care of a Family Experiencing a Complication of Labor or Birth

24 Nursing Care of a Family During a Surgical Intervention for Birth

25 Nursing Care of a Family Experiencing a Postpartum Complication

26 Nursing Care of a Family With a High-Risk Newborn

27 Nursing Care of the Child Born With a Physical or Developmental Challenge

UNIT 5 The Nursing Role in Health Promotion for Childrearing Family

28 Principles of Growth and Development

29 Nursing Care of a Family with an Infant

30 Nursing Care of a Family with a Toddler

31 Nursing Care of a Family With a Preschool Child

32 Nursing Care of a Family With a School-Age Child

33 Nursing Care of a Family With an Adolescent

34 Child Health Assessment

35 Communication and Teaching With Children and Families

UNIT 6 The Nursing Role in Supporting the Health of Ill Children and Their Families

36 Nursing Care of a Family With an Ill Child

37 Nursing Care of a Family When a Child Needs Diagnostic or Therapeutic Modalities

38 Nursing Care of a Family When a Child Needs Medication Administration or Intravenous Therapy

39 Pain Management in Children

UNIT 7 The Nursing Role in Restoring and Maintaining the Health of Children and Families With Physiologic Disorders

40 Nursing Care of a Family When a Child Has a Respiratory Disorder

41 Nursing Care of a Family When a Child Has a Cardiovascular Disorder

42 Nursing Care of a Family When a Child Has an Immune Disorder

43 Nursing Care of a Family When a Child Has an Infectious Disorder

44 Nursing Care of a Family When a Child Has a Hematologic Disorder

45 Nursing Care of a Family When a Child Has a Gastrointestinal Disorder

46 Nursing Care of a Family When a Child Has a Renal or Urinary Tract Disorder

47 Nursing Care of a Family When a Child Has a Reproductive Disorder

48 Nursing Care of a Family When a Child Has an Endocrine or a Metabolic Disorder

49 Nursing Care of a Family When a Child Has a Neurologic Disorder

50 Nursing Care of a Family When a Child Has a Vision or Hearing Disorder

51 Nursing Care of a Family When a Child Has a Musculoskeletal Disorder

52 Nursing Care of a Family When a Child Has an Unintentional Injury

53 Nursing Care of a Family When a Child Has a Malignancy

UNIT 8 The Nursing Role in Restoring and Maintaining the Mental Health of Children and Families

54 Nursing Care of a Family When a Child Has an Intellectual or Mental Health Disorder

55 Nursing Care of a Family in Crisis: Maltreatment and Violence in the Family

56 Nursing Care of a Family When a Child Has a Long-Term or Terminal Illness

1. For which reasons would a nurse review infant mortality statistics in the United States? (Select all that apply.)

- A) Measures the quality of pregnancy care
- B) Reviews information on overall nutrition
- C) Compares health with those of other states
- D) Determines infant health and available care
- E) Provides an index of the country's general health

Ans: A, B, D, E

Feedback:

Infant mortality statistics provide an index of a country's general health, measures the quality of pregnancy care, provides information on overall nutrition, and determines infant health and available care. Infant mortality statistics compares the health with those of other countries and not with those of other states.

2. The nurse is providing care in an organization that supports the maternal and child care continuum. Which type of patient care area is an example of this approach?

- A) Primary care
- B) Team nursing
- C) Case management
- D) Family-centered care

Ans: D

Feedback:

Keeping the family at the center of care is important because the level of a family's functioning is important to the health status of its members. A healthy family establishes an environment conducive to growth and health-promoting behaviors to sustain family members during crises. A family-centered approach enables nurses to better understand individuals and their effect on others and, in turn, to provide more holistic care. Primary nursing, team nursing, and case management do not necessarily take into consideration the maternal and child care continuum.

3. Which actions should the nurse perform when supporting the goals of maternal and child health care? (Select all that apply.)

- A) Advocates protecting the rights of the mother and fetus
- B) Teaches family members interventions to improve health
- C) Adheres to principles that focus on the needs of the mother
- D) Encourages maternal hospitalization to regain strength and stamina
- E) Assesses family members for strengths and specific needs or challenges

Ans: A, B, E

Feedback:

Actions that the nurse should perform when supporting the goals of maternal and child health care include advocating the rights for the mother and fetus, teaching health promotion interventions, and assessing the family for strengths and specific needs or challenges. Adhering to principles that focus on the needs of the mother and encouraging maternal hospitalization to regain strength and stamina are not actions that support the goals of maternal and child health care.

4. The nurse is reviewing the 2020 National Health Goals and notes that which is a focus of these goals?

- A) Health promotion and disease prevention
- B) Early diagnosis of chronic health problems
- C) Effective use of medication to treat disease
- D) Reduce the cost of health care and medications

Ans: A

Feedback:

The 2020 National Health Goals are intended to help citizens more easily understand the importance of health promotion and disease prevention and to encourage wide participation in improving health in the next decade. These goals do not focus on the early diagnosis of chronic problems, use of medications to treat disease, or reduce the cost of health care and medications.

5. The nurse has noticed a change in the type of care needed to support maternal and child health issues. What does the nurse realize as reasons for the changes in care? (Select all that apply.)
- A) Smaller families
 - B) Less domestic violence
 - C) More employed mothers
 - D) Stable home environments
 - E) More single-parent families

Ans: A, C, E

Feedback:

Nursing care for maternal and child is changing because families are smaller, more mothers are employed out of the home, and there are more single-parent families. There is an increase in domestic violence, and families are less stable and more mobile, which influences homelessness.

6. During an assessment, the nurse asks a patient from a non-English-speaking culture which types of home remedies and herbs the patient uses for health care. What is the purpose of asking the patient this question?
- A) Analyze for herb–drug interactions
 - B) Understand the patient's philosophy of alternative health care
 - C) Determine the types of medications the patient will need to be prescribed
 - D) Explain to the physician the patient's preference for nontraditional medicine approaches

Ans: A

Feedback:

Assessing what alternative measures are being used is important because the action of an herb can interfere with prescribed medications. Assessing the use of herbal remedies is not done to understand the patient's philosophy of alternative health care, determine the types of medications the patient will need to be prescribed, or explain the patient's preferences for nontraditional medicine approaches to the physician.
