

TEST BANK

Test Bank for Medical Surgical Nursing 10th Edition by Ignatavicius

Table of Contents

Section I: Concepts of Medical-Surgical Nursing

1. Overview of Professional Nursing Concepts for Medical-Surgical Nursing
2. From Clinical Judgment to Systems Thinking
3. Overview of Health Concepts for Medical-Surgical Nursing
4. Common Health Problems of Older Adults
5. Assessment and Concepts of Care for Patients with Pain
6. Concepts of Genetics and Genomics
7. Concepts of Rehabilitation for Chronic and Disabling Health Problems
8. Care of Patients at End-of-Life
9. Care of Perioperative Patients

Section II: Concepts of Emergency Care and Disaster Preparedness

10. Concepts of Emergency and Trauma Nursing
11. Care of Patients with Common Environmental Emergencies
12. Concepts of Disaster Preparedness

Section III: Concepts of Patients with Problems of Fluid, Electrolyte, and Acid-Base Balance

13. Concepts of Fluid and Electrolyte Balance
14. Concepts of Acid-Base Balance
15. Concepts of Infusion Therapy

Section V: Interprofessional Collaboration for Patients with Problems of Immunity

16. Concepts of Inflammation and Immunity
17. Care of Patients with HIV Disease
18. Care of Patients with Hypersensitivity (Allergy) and Autoimmunity

- 19. Concepts of Cancer Development
- 20. Care of Patients with Cancer
- 21. Care of Patients with Infection

Section VI: Interprofessional Collaboration for Patients with Problems of the Skin, Hair, and Nails

- 22. Assessment of the Skin, Hair, and Nails
- 23. Care of Patients with Skin Problems

Section VII: Interprofessional Collaboration for Patients with Problems of the Respiratory System

- 24. Assessment of the Respiratory System
- 25. Care of Patients Requiring Oxygen Therapy or Tracheostomy
- 26. Care of Patients with Noninfectious Upper Respiratory Problems
- 27. Care of Patients with Noninfectious Lower Respiratory Problems
- 28. Care of Patients with Infectious Respiratory Problems
- 29. Critical Care of Patients with Respiratory Emergencies

Section VIII: Interprofessional Collaboration for Patients with Problems of the Cardiovascular System

- 30. Assessment of the Cardiovascular System
- 31. Care of Patients with Dysrhythmias
- 32. Care of Patients with Cardiac Problems
- 33. Care of Patients with Vascular Problems
- 34. Critical Care of Patients with Shock
- 35. Critical Care of Patients with Acute Coronary Syndromes

Section IX: Interprofessional Collaboration for Patients with Problems of the Hematologic System

- 36. Assessment of the Hematologic System

37. Care of Patients with Hematologic Problems

Section X: Interprofessional Collaboration for Patients with Problems of the Nervous System

38. Assessment of the Nervous System

39. Care of Patients with Problems of the Central Nervous System: The Brain

40. Care of Patients with Problems of the Central Nervous System: The Spinal Cord

41. Critical Care of Patients with Neurologic Emergencies

Section XI: Interprofessional Collaboration for Patients with Problems of the Sensory System

42. Assessment and Concepts of Care for Patients with Eye and Vision Problems

43. Assessment and Concepts of Care for Patients with Ear and Hearing Problems

Section XII: Interprofessional Collaboration for Patients with Problems of the Musculoskeletal System

44. Assessment of the Musculoskeletal System

45. Care of Patients with Musculoskeletal Problems

46. Care of Patients with Arthritis and Total Joint Arthroplasty

47. Care of Patients with Musculoskeletal Trauma

Section XIII: Interprofessional Collaboration for Patients with Problems of the Gastrointestinal System

48. Assessment of the Gastrointestinal System

49. Care of Patients with Oral Cavity and Esophageal Problems

50. Care of Patients with Stomach Disorders

51. Care of Patients with Noninflammatory Intestinal Disorders

52. Care of Patients with Inflammatory Intestinal Disorders

53. Care of Patients with Liver Problems

54. Care of Patients with Problems of the Biliary System and Pancreas

55. Care of Patients with Malnutrition: Undernutrition and Obesity

Section XIV: Interprofessional Collaboration for Patients with Problems of the Endocrine System

56. Assessment of the Endocrine System

57. Care of Patients with Pituitary and Adrenal Gland Problems

58. Care of Patients with Problems of the Thyroid and Parathyroid Glands

59. Care of Patients with Diabetes Mellitus

Section XV: Interprofessional Collaboration for Patients with Problems of the Renal/Urinary System

60. Assessment of the Renal/Urinary System

61. Care of Patients with Urinary Problems

62. Care of Patients with Kidney Disorders

63. Care of Patients with Acute Kidney Injury and Chronic Kidney Disease

Section XVI: Interprofessional Collaboration for Patients with Problems of the Reproductive System

64. Assessment of the Reproductive System

65. Care of Patients with Breast Disorders

66. Care of Patients with Gynecologic Problems

67. Care of Patients with Male Reproductive Problems

68. Care of Transgender Patients

69. Care of Patients with Sexually Transmitted Infections

Chapter 01: Overview of Professional Nursing Concepts for Medical-Surgical Nursing

Ignatavicius: Medical-Surgical Nursing, 10th Edition

MULTIPLE CHOICE

1. A new nurse is working with a preceptor on a medical-surgical unit. The preceptor advises the new nurse that which is the **priority** when working as a professional nurse?
 - a. Attending to holistic client needs
 - b. Ensuring client safety
 - c. Not making medication errors
 - d. Providing client-focused care

ANS: B

All actions are appropriate for the professional nurse. However, ensuring client safety is the priority. Health care errors have been widely reported for 25 years, many of which result in client injury, death, and increased health care costs. There are several national and international organizations that have either recommended or mandated safety initiatives. Every nurse has the responsibility to guard the client's safety. The other actions are important for quality nursing, but they are not as vital as providing safety. Not making medication errors does provide safety, but is too narrow in scope to be the best answer.

DIF: Understanding

TOP: Integrated Process: Nursing Process: Intervention

KEY: Client safety

MSC: Client Needs Category: Safe and Effective Care Environment: Safety and Infection Control

2. A nurse is orienting a new client and family to the medical-surgical unit. What information does the nurse provide to best help the client promote his or her own safety?
 - a. Encourage the client and family to be active partners.
 - b. Have the client monitor hand hygiene in caregivers.
 - c. Offer the family the opportunity to stay with the client.
 - d. Tell the client to always wear his or her armband.

ANS: A

Each action could be important for the client or family to perform. However, encouraging the client to be active in his or her health care as a safety partner is the most critical. The other actions are very limited in scope and do not provide the broad protection that being active and involved does.

DIF: Understanding

TOP: Integrated Process: Teaching/Learning

KEY: Client safety

MSC: Client Needs Category: Safe and Effective Care Environment: Safety and Infection Control

3. A nurse is caring for a postoperative client on the surgical unit. The client's blood pressure was 142/76 mm Hg 30 minutes ago, and now is 88/50 mm Hg. What action would the nurse take **first**?
 - a. Call the Rapid Response Team.
 - b. Document and continue to monitor.
 - c. Notify the primary health care provider.
 - d. Repeat the blood pressure in 15 minutes.

ANS: A

The purpose of the Rapid Response Team (RRT) is to intervene when clients are deteriorating before they suffer either respiratory or cardiac arrest. Since the client has manifested a significant change, the nurse would call the RRT. Changes in blood pressure, mental status, heart rate, temperature, oxygen saturation, and last 2 hours' urine output are particularly significant and are part of the Modified Early Warning System guide. Documentation is vital, but the nurse must do more than document. The primary health care provider would be notified, but this is not more important than calling the RRT. The client's blood pressure would be reassessed frequently, but the priority is getting the rapid care to the client.

DIF: Applying TOP: Integrated Process: Communication and Documentation

KEY: Rapid Response Team (RRT), Clinical judgment

MSC: Client Needs Category: Physiological Integrity: Physiological Adaptation

4. A nurse wishes to provide client-centered care in all interactions. Which action by the nurse **best** demonstrates this concept?
- Assesses for cultural influences affecting health care.
 - Ensures that all the client's basic needs are met.
 - Tells the client and family about all upcoming tests.
 - Thoroughly orients the client and family to the room.

ANS: A

Showing respect for the client and family's preferences and needs is essential to ensure a holistic or "whole-person" approach to care. By assessing the effect of the client's culture on health care, this nurse is practicing client-focused care. Providing for basic needs does not demonstrate this competence. Simply telling the client about all upcoming tests is not providing empowering education. Orienting the client and family to the room is an important safety measure, but not directly related to demonstrating client-centered care.

DIF: Understanding

TOP: Integrated Process: Culture and Spirituality

KEY: Client-centered care, Culture

MSC: Client Needs Category: Psychosocial Integrity

5. A client is going to be admitted for a scheduled surgical procedure. Which action does the nurse explain is the **most** important thing the client can do to protect against errors?
- Bring a list of all medications and what they are for.
 - Keep the provider's phone number by the telephone.
 - Make sure that all providers wash hands before entering the room.
 - Write down the name of each caregiver who comes in the room.

ANS: A

Medication reconciliation is a formal process in which the client's actual current medications are compared to the prescribed medications at the time of admission, transfer, or discharge. This National client Safety Goal is important to reduce medication errors. The client would not have to be responsible for providers washing their hands, and even if the client does so, this is too narrow to be the most important action to prevent errors. Keeping the provider's phone number nearby and documenting everyone who enters the room also do not guarantee safety.

DIF: Applying TOP: Integrated Process: Teaching/Learning

KEY: Client safety, Informatics

MSC: Client Needs Category: Safe and Effective Care Environment: Safety and Infection Control
